

Linh Tuan Le

Senior Full-Stack Engineer · End to end, from server to screen

linh@lelinh.dev
lelinh.dev · github.com/Linh35
Sofia, Bulgaria · Remote contractor

9 years on one production platform / ~100 LoRaWAN networks / hundreds of thousands of devices / queries under 250 ms

PROFILE

Thirteen years of shipping end to end mean I can be the one engineer who takes a feature from LoRaWAN radio firmware and bare-metal Linux, through AWS pipelines and Elasticsearch read layers, to the Vue and React dashboards people use every day. I move quickly from an idea to working software, then harden it into something fast, dependable, and easy for the next person to maintain. I work as an independent contractor, often on the road, which has made me deliberate about written, async communication and dependable delivery across time zones.

SKILLS

Languages JavaScript · TypeScript · Node.js · Python · Go · Rust · C · C++ · Zig
Frontend & Mobile Vue · React · Android · iOS
Data SQL · Elasticsearch · DynamoDB
Infra & DevOps AWS · Azure · Linux / Unix admin · Networking (CCNA) · Self-hosting · LoRaWAN / IoT

EXPERIENCE

Software Engineer OpenSensors

Apr 2017 – Present · 9 yrs

- Built the IoT fleet-management platform behind roughly 100 LoRaWAN networks and hundreds of thousands of devices, and have kept it healthy in production for nine years. Every device reports every ten minutes, and each reading is ingested, aggregated, and queryable in under 250 milliseconds.
- Own the full path a sensor reading travels, from LoRaWAN radio and low-level device code, through AWS compute, storage, and queues, into the database. That ownership extends to sensor inventory and administration of the Unix servers the platform runs on.
- Designed and built the Vue 3 operator dashboards on an Elasticsearch read layer, shipped cross-platform mobile apps, and built the authentication system the entire platform depends on.

Software Developer MentorMate

Sep 2015 – Apr 2017

Built client applications at speed using what was then the newest web technology, shipping Angular 1 single-page apps with real-time features over WebSockets.

Software Engineer Finmaven / Mavendocs

Feb 2014 – Mar 2015

Worked as a full-stack JavaScript and Node.js developer building social-intelligence tools, turning noisy social data into something teams could actually act on.

Software Engineer Masthead Studios

Oct 2011 – Jan 2014

Contributed to a custom C++ engine and Unity (C#) titles in active development: Earthrise, a sci-fi MMORPG, and Guns n Robots, a multiplayer shooter.

Junior Web Developer Haemimont AAD

Apr 2011 – Sep 2011

PROJECTS

When. getwhen.net

Co-creator

A privacy-first period tracker that syncs cycle phases to a calendar the user already owns: Google, Notion, or any CalDAV server, so health data never lives on someone else's platform.

lelinh.dev Personal portfolio

Ongoing

A zero-dependency portfolio site built for the joy of it: a GPU-driven Gray-Scott reaction-diffusion background, a hover-prefetch router, and theming that never flashes on load.

EDUCATION & CERTIFICATIONS

BS, Informatics New Bulgarian University 2016
High School, Software Engineering TUES 2012
CCNA – Cisco Certified Network Associate Cisco

AVAILABILITY

Open to B2B contracts or full-time remote roles where it helps to have one senior engineer own a product surface end to end. Based in Sofia, comfortable across time zones; rate and terms depend on scope and duration.
